Thiruvananthapuram, India | sreerammurali2005@gmail.com | +91 70121 63651 | LinkedIn | GitHub

Summary

Computer Science student with hands-on experience building and deploying machine learning systems in Python – from anomaly-detection models to computer-vision pipelines – using PyTorch, TensorFlow, and Scikit-learn. Track record of taking ML projects from prototype to production: architected a system processing 10,000+ daily events, cut false positives by 40%, and shipped a computer-vision model at 92% accuracy behind a REST API serving 500+ concurrent users. 1st Place, Google Vortexa Hackathon (200+ teams). Comfortable with Git/GitHub workflows and deploying to AWS, Vercel, and Render.

Education

APJ Abdul Kalam Technological University (KTU)

Thiruvananthapuram, India

B.Tech in Computer Science and Engineering (Ourdes Matha College)

Aug 2023 – Aug 2027

- Relevant Coursework: Data Structures & Algorithms, Machine Learning, Object-Oriented Programming, Computer Networks, Operating Systems, Database Management Systems

Projects

AI-Powered Security Operations Center | GitHub

- Architected a cloud-native platform in Python that ingests and processes 10,000+ daily log events for real-time anomaly detection and threat intelligence.
- Built and trained anomaly-detection models (Isolation Forest, LSTM) and exposed them via REST APIs, reducing false-positive alerts by 40% and improving Mean Time to Detection by 35%.
- Collaborated with a cross-functional team to design, build, and ship a working prototype in under 6 hours, placing 1st among 200+ teams at the Google Vortexa Hackathon.

AI Deepfake Detection & Identity Verification System | GitHub

- Designed a modular face-verification system combining a ResNet-50 backbone with FaceNet embeddings, reaching 92% accuracy on standard benchmarks.
- Optimized the inference pipeline with model quantization and adaptive batching, cutting per-request latency by 33% while processing 1,000+ images in under 1.5s each.
- Deployed the model behind a Flask REST API supporting 500+ concurrent users with sub-second response times.

Nammude Kerala – Civic Issue Reporting Platform | GitHub | Live

- Built a full-stack civic engagement platform (Next.js, FastAPI) letting citizens report and vote on local civic issues and tag their official assembly constituency across all 140 Kerala assembly constituencies.
- Designed a modular backend with JWT authentication, Bcrypt password hashing, and a custom sliding-window Token Bucket rate limiter; used SQLAlchemy with a dual PostgreSQL/SQLite adapter for production and offline development.
- Implemented a WebSocket engine broadcasting real-time feed updates and notifications, and deployed the stack to production (Next.js frontend on Vercel, FastAPI backend on Render via Infrastructure-as-Code) on a fully free-tier architecture.

E-Commerce Data Lakehouse Ingestion & Transformation Pipeline | GitHub

- Built a data lakehouse with Docker, Apache Spark (PySpark), Apache Iceberg, and MinIO following the Medallion Architecture for scalable, queryable data storage.
- Wrote distributed ETL pipelines for data cleansing, schema enforcement, and SQL MERGE upserts.
- Automated daily incremental ingestion and backfill workflows with Apache Airflow.

Technical Skills

Languages: Python, Java, C

Machine Learning & AI: PyTorch, TensorFlow, Scikit-learn, Hugging Face, OpenCV, Pandas

Backend, Cloud & Deployment: Flask, FastAPI, REST APIs, WebSockets, Node.js, React, Next.js, AWS, Kubernetes, Vercel, Render

Tools & Practices: Git, GitHub Actions (CI/CD), Docker, Unix/Linux, Data Structures & Algorithms, Object-Oriented Design, System Design

Achievements & Leadership

Google Vortexa Hackathon – 1st Place: Led design, development, and delivery of a working AI security-automation prototype in 6 hours, placing 1st among 200+ competing teams.

Placement Operations Lead, Ourdes Matha College (2026): Coordinated campus recruitment logistics for 100+ students, including mock-interview scheduling and early outreach to corporate recruiters.
