SUMMARY

Results-driven AI/ML Engineer with a proven track record of designing and deploying intelligent systems, specifically within cybersecurity automation and financial analytics. Adept at managing the complete machine learning lifecycle—from feature engineering and model training to RESTful API integration and cloud deployment. Google Vortexa Hackathon Winner with practical experience delivering scalable, full-stack AI solutions using Python and PyTorch.

EDUCATION

APJ Abdul Kalam Technological University (KTU)

Thiruvananthapuram, India

B.Tech in Computer Science and Engineering (*Lourdes Matha College*)

Aug 2023 – May 2027

Relevant Coursework: Data Structures & Algorithms, Machine Learning, Database Management Systems, Computer Networks, Operating Systems, Software Engineering, Object-Oriented Programming

PROJECTS

AI-Powered Security Operations Center | GitHub

- Architected an end-to-end AI-driven SOC platform ingesting **10,000+ log events daily** across distributed network endpoints, enabling real-time threat intelligence and automated incident response workflows.
- Engineered ML-based anomaly detection models (Isolation Forest, LSTM), reducing false-positive alert fatigue by **40%** and improving Mean Time to Detection (MTTD) by **35%** through intelligent event prioritization and filtering.
- Awarded 1st place at Google Vortexa Hackathon**—delivered production-ready SOC MVP from scratch in under 6 hours, outperforming **200+ competing teams**.

AI Deepfake Detection & Identity Verification System | GitHub

- Designed and deployed a multi-architecture face verification system combining ResNet-50 feature extraction with FaceNet embeddings, achieving **92% accuracy** on standard deepfake benchmark datasets.
- Optimized inference pipeline via model quantization and adaptive batching, processing **1,000+ facial images at under 1.5 s per request**—a 33% latency reduction over the initial baseline architecture.
- Built a scalable RESTful API backend in Flask supporting concurrent identity verification, architected to handle **500+ simultaneous users** with sub-second authentication response times.

Transformer Chatbot | GitHub

- Developed a Transformer-based conversational AI chatbot using PyTorch, implementing self-attention mechanisms and positional encoding for natural language understanding and response generation.
- Built an end-to-end NLP pipeline including text preprocessing, tokenization, vocabulary creation, sequence encoding, model training, and inference for conversational datasets.
- Implemented and evaluated encoder-decoder Transformer architecture, gaining practical experience with attention-based deep learning models, sequence modeling, and modern NLP workflows.

TECHNICAL SKILLS

Programming: Python, Java, C, C++

AI, Machine Learning & NLP: PyTorch, TensorFlow, Scikit-learn, Hugging Face Transformers, Retrieval-Augmented Generation (RAG), Deep Learning

Data Science & Vision: Pandas, NumPy, Matplotlib, Seaborn, OpenCV, Feature Engineering, Vector Databases

Backend, Cloud & MLOps: Flask, REST APIs, MySQL, MongoDB, Docker, Git/GitHub Actions (CI/CD), Model Deployment (Render, Vercel)

Core Competencies: Data Structures & Algorithms, Machine Learning Pipelines, Object-Oriented Programming, System Design, Software Engineering

ACHIEVEMENTS & LEADERSHIP

- Google Vortexa Hackathon – 1st Place:** Designed and developed an AI-powered Security Operations Center (SOC) platform within 6 hours, integrating automated threat monitoring, incident detection, and security analytics. Secured first position among 200+ participating teams through rapid prototyping and technical innovation.
- Placement Operations Lead, Lourdes Matha College (2026):** Coordinated placement activities for 100+ students, serving as the primary liaison between recruiters, faculty, and student teams. Managed recruitment logistics, mock interview programs, and campus hiring initiatives to improve placement preparedness.
